

CBS SPORTS uses Wireless HD at SBXLI

For this year's Super Bowl, CBS Sports taps CP Communications for their wireless HD Camera systems at SBXLI. CBS requested the Link Research Technology for the wireless HD camera's this year and CP Communications, a NY based company with offices in CA and FL as well, was chosen as the vendor. "We have had a long standing relationship with CBS Sports providing all of their RF Audio needs for their NFL coverage, and we are very excited to be providing the latest in wireless HD technology for the Super Bowl, the stage doesn't get any bigger than this!" says Kurt Heitmann, VP of Sales and Marketing. "When Nick Muro and Bruce Goldfeder from CBS approached us and requested the Link Technology, it worked out perfectly, since we already use the Link Technology for both our SD wireless systems and our HD."

CP provided 5 systems. "With the coverage area that CBS needed, complete inside stadium coverage as well as the outside set and the NFL experience, we put our engineering experience together and made it happen. We used antenna systems over fiber and brought it all back to our main trailer and the distributed the HD signal to the trucks."

CP New York- 200 Clearbrook Road, Elmsford, NY 10523
CP Orlando- 4303 Vineland Road, Suite F7, Orlando, FL 32811
CP Burbank- 2521 North Ontario Street, Burbank, CA 91504
