

HS-6

- *Push-to-talk switch*
- *4-pin female XLR connector*
- *Convenient coiled cable*
- *For use with main and remote intercom/speaker stations*

TELEPHONE HANDSET FOR INTERCOM COMMUNICATIONS

The HS-6 telephone-style handset offers a convenient means for the less frequent intercom user to link with the system. It is also useful when comfort or appearance requires a more conventional look. Full-duplex communication is possible, and the push-to-talk button minimizes bleed of external sound into the intercom line when the handset is not in use. The handset connects with the intercom station via a 4-pin female XLR connector on a coiled cord. A wall/console mounting cradle is included.
